### GUARANTEED ANALYSIS

Crude Protein (min)	18.0%
Crude Fat (min)	10.5%
Crude Fiber (max)	1.5%
Moisture (max)	65.0%
Taurine (min)	0.05%

Depending on the age, activity level and condition of your cat, the feeding guidelines will need to be adjusted. The normal daily feeding amount for a healthy adult cat:

Cat's Weight	Cups to Feed Per Day*
5 - 9 lbs	2/3 - 1
10 - 15 lbs	1 - 1 1/2

\*Using standard 8 oz measuring cup

### FEEDING GUIDELINES

The above quantities can be fed as one meal or divided into two meals based on your cat's preference. For pregnant or lactating females, offer two to three times the normal adult requirement. For kittens, feed up to twice the normal adult requirement from two to fourteen months of age in three to four feedings. Please adjust the amount you serve to ensure your cat finishes the food within three hours. If any food remains, please discard and clean bowl before serving new food. When switching foods, gradually increase the new food and decrease the previous food to help make a smooth transition. Visit your veterinarian regularly to maintain your pet's health. Always provide fresh water.
